

# cyber awareness training program

Businesses across all industries are increasingly targeted by cyber attacks. For many businesses, the front-line of defence - their staff - are not equipped to stand against these attacks. Proper education and awareness training equips your staff with the tools they need to protect your business from cyber threats.

## WHAT IS OUR CYBER AWARENESS TRAINING PROGRAM?

cyberSuite's Cyber Awareness Training Program provides your organisation's staff with regular, tracked, and effective training. The program increases the effectiveness of one of the most powerful cyber security tools - well-trained staff.

Through our partner, CyberHoot, bite-sized training modules are delivered directly to your staff's email every month. Each module takes just 5-7 minutes to complete, making it easy to fit into busy work schedules while enhancing cybersecurity awareness. Every quarter, employees receive specialised training focused on recognising phishing emails, with interactive assessments to identify suspicious elements one by one. Managers also receive regular compliance reports, providing insights into their team's training progress.

## WHY CONDUCT A CYBER AWARENESS TRAINING PROGRAM?

### Reduced Risk

The knowledge and skills obtained from this training program will significantly reduce your organisation's cyber security risks. A well-trained staff greatly reduces the risk of all common cyber attacks, including costly and reputationally damaging data breaches.

### Increased Staff Confidence

Our Cyber Awareness Training Program will give your staff confidence to manage risks and protect organisational assets while carrying out their regular organisational duties. This confidence can result in increased productivity and promotes a positive organisational security culture.

### Easy & Cost-Effective Integration

The onboarding process is as simple as providing the names and email addresses of your staff. The content is automatically delivered straight their email, with no login to remember or set up. There is no costly setup process involving your IT staff or service providers; just great training delivered at a great price.

# cyber awareness training program

## OUTCOMES

### Regular Online Training

Trainings are presented through short engaging videos and quizzes directly emailed to staff each month. This automatic, frequent training program results in increased retention and attentiveness around security.

### Detailed Reporting

You will receive automated status reports to your email to track your staff's training and compliance progress, in addition to Dark Web Monitoring reports, outlining employee account exposures.

### Positive Phishing Training

Our method for training your staff to recognise phishing is evidence-backed, positive in nature, and unique from other offerings on the market. Instead of sending fake emails to your staff, the system invites active participation on the training platform. Staff are asked to assess each element of an email one-by-one to determine if it's safe or unsafe, ultimately increasing their ability to recognise and assess the safety of emails in the real world. Find out more about our Positive Phishing through [this video from our partner](#).

# who we are

cyberSuite is your trusted ally in navigating the intricate landscape of cybersecurity. Our team of cyber advisory specialists is dedicated to empowering individuals and businesses of all sizes. We enable you to safeguard your digital assets, offering tailored solutions to fortify your defences against evolving threats. With cyberSuite, embark on a journey of resilience, innovation, and unwavering protection in the digital age. Your cybersecurity success story begins here.

## OUR TEAM

### Cris White | Head of Advisory

Cris leads cyberSuite's cyber advisory team, combining his military background and risk management expertise to help organizations build resilience and navigate uncertainty. His hands-on approach spans all service areas, including conducting tabletop exercises and offering vCISO consultations.

### Tai Tran | Senior Cyber Security Analyst

Tai has in-depth expertise in technology and change leadership. As an ISO27001 Lead Auditor and a holder of CISSP and CISM, Tai is passionate about assisting organisations to improve and solidify their governance and compliance practices.

### Chris Lea | Cyber Security Analyst

Chris is our excited and cheerful security analyst who leads several service areas, including our Cyber Security Assessments and eDiscovery Service. He is an Associate of ISC2 and loves finding ways to improve processes and systems.

### Chali Tillakaratne | Security Operations Analyst

Chali leads our Security Operations and Cyber Threat Intelligence capabilities. With a background in IT system administration, he is well versed in Microsoft platforms, as well as specialised security tooling such as Black Kite and Sentinel One.

### Allana Boyd-Boland | Solicitor

Allana is a Solicitor focused on privacy and cyber law. Her expertise assists organisations by providing clarity around Privacy legislation, practical privacy policies, and providing advice for data breach eDiscovery.
